IN THE ABSTRACT:

Please replace the abstract of the disclosure on file with the following:

A method allows a customer to use components provided by a supplier for building an automobile entertainment system. The method includes the steps of: accessing a supplier terminal by a customer terminal through a communication network; displaying a demonstration screen showing examples of available products; listing a plurality of main systems each being expressed by an image and text; selecting one of the main systems; displaying a plurality of sub-systems within the main system each being expressed by an image and text where the image shows relationships among components in the sub-system; selecting one of the sub-systems; supplying information regarding customer's vehicle for determining fitment of the components; displaying a list of recommended components appropriate for configuring the selected sub-system; and selecting components configuring the sub-system.
